## BEL O JUST® TWO TANDEM BELLOWS METERING PUMP

### DESCRIPTION

The BEL O JUST® pump size is the actual outside diameter of the bellows. The pump operates on an adjustable stroke, positive displacement principle. Output is changed by adjusting the stroke with knob on side. This can be done while pump is running. The pump is driven by a thermally protected gearmotor which is attached to a pivot arm and operates adjustable pivot lever action assembly. The bellows, pump body, valve seats and tubing connectors are made of polypropylene.

Exposure of the motor to extremely dusty or corrosive environment may reduce life.

### PRIMING

The pump is self-priming under most conditions: however, the priming ability lessens with greater suction lift, higher discharge head, or with reduced stroke. For dry start up on pumps with anti-siphon spring adjusted at low stroke, pump may not prime. Remove anti-siphon spring, prime pump and replace spring.

After the pump has been primed and is full of liquid, subsequent repriming ability will be improved.

### FLOW ADJUSTMENT

Regulate output flow of bellows pump with adjusting knob on side of pump assembly. Rotate knob clockwise to increase flow and

counter-clockwise to decrease flow. An indicator scale is provided for a proportional average. The pump output is adjustable down to 20% of maximum flow for ½" and ¾" bellows, 10% for 1", 1½", 2" and 2½" pumps.

**Do not reduce output flow by restricting suction or discharge as this will cause excessive pressure within the pump.**

### PRESSURE

The bellows pump has the ability to discharge into a pressurized system; however, if system or discharge pressure exceeds maximum psi rating of bellows, it may cause damage to the bellows or gearbox.

#### Maximum PSI Rating:

- ½" modules pump – 50 psi
- ¾" modules pump – 5 psi
- 1" modules pump – 40 psi
- 1½" modules pump – 20 psi
- 2" modules pump – 5 psi
- 2½" modules pump – 5 psi

**NOTE:** Pumps are designed for use with liquid up to 120°F (49°C) at catalog rated pressure. Reduce the maximum psi rating by 50% for temperatures over 120°F. Not applicable in liquids over 140°F.

### VISCOSITY

The pump has been designed to handle a wide range of liquid viscosities. It should be noted,

however, that when pumping thicker liquids it may be necessary to increase the size of connectors and tubing to relieve the pressure buildup within the pump assembly. It is good practice when pumping the heavier liquids to keep the liquid velocity (pump speed) as low as possible.

When pumping heavy suspensions which may tend to settle out, extremely corrosive solutions or any liquid which may tend to become more viscous with time, flush pump after use to increase pump life.

### CHEMICAL SERVICE

The bellows pump will handle many different kinds of liquids. For specific chemical service, refer to our Full Line Catalog, Form No. 86216.

Special bellows materials (chlorine resistant and acid resistant) are available. Chlorine resistant bellows are available in ½", ¾", 1", 1½", 2" and 2½" sizes. Pumps using chlorine resistant bellows should have pressure ratings shown in the paragraph under pressure heading reduced by 50%. Acid resistant bellows are available in 1" and 1½" sizes only, and standard pressures apply.

### TEMPERATURE

Pumps are designed to operate in 80°F (27°C) ambient temperature. For higher ambient temperature operations, consult the factory.

## TROUBLESHOOTING GUIDE

The troubleshooting guide is a suggestion or aid in helping solve problems that might arise.

**NOTE: Never work on pump without making certain power is off.**

### PUMP LEAKS

1. Bellows loose – Turn adjusting knob to full stroke, then rotate crank assembly to maximum bellows compression. Tighten plastic nut on crank assembly to 14 in.-lbs. maximum. **CAUTION:** Overtightening will distort bellows and cause leaks.
2. Connectors loose – Tighten to 5½ to 6½ in.-lbs. torque (finger tight).
3. O-ring defective or missing – See illustration.

### MOTOR WILL NOT RUN

1. Cord, plug or switch defective.
2. Wires pulled loose.
3. Motor overtemperature thermostat open, motor overheating or poor ventilation.

### UNIT WILL NOT PRIME

1. Pump leaks on suction side (see "Pump Leaks" section).
2. Bellows ruptured.
3. O-ring defective or missing – See illustration.
4. Valves inverted or reversed.
5. Pump air-locked – Temporarily bleed off discharge pressure.
6. Stroke too short – Adjust knob to increase stroke.
7. Viscosity too high.
8. Anti-siphon spring with pump adjusted at low stroke.

### PUMP NOISY

1. Fan hitting.
2. Gearmotor worn out.

### ERRATIC OR LOW FLOW

1. Valves dirty – Dirt or foreign material in valves.
2. Crank set screw broken.
3. Valves not seating.
4. Connectors loose.

### UNIT WILL NOT PUMP

1. Bellows ruptured.
2. Crank broken.
3. Crank set screw broken.
4. Valves dirty – Dirt or foreign material in valves.
5. Valves may have deteriorated.

### WARRANTY

Gorman-Rupp Industries warrants to Buyer that products sold by it will upon shipment conform to the description on the face hereof and any written specifications expressly approved by Seller and be free from defects in title, material and workmanship. NO OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, SHALL EXIST IN CONNECTION WITH ANY PRODUCTS SOLD BY SELLER, AND ALL SUCH WARRANTIES ARE HEREBY EXPRESSLY EXCLUDED.

### WARNING

#### DANGER:

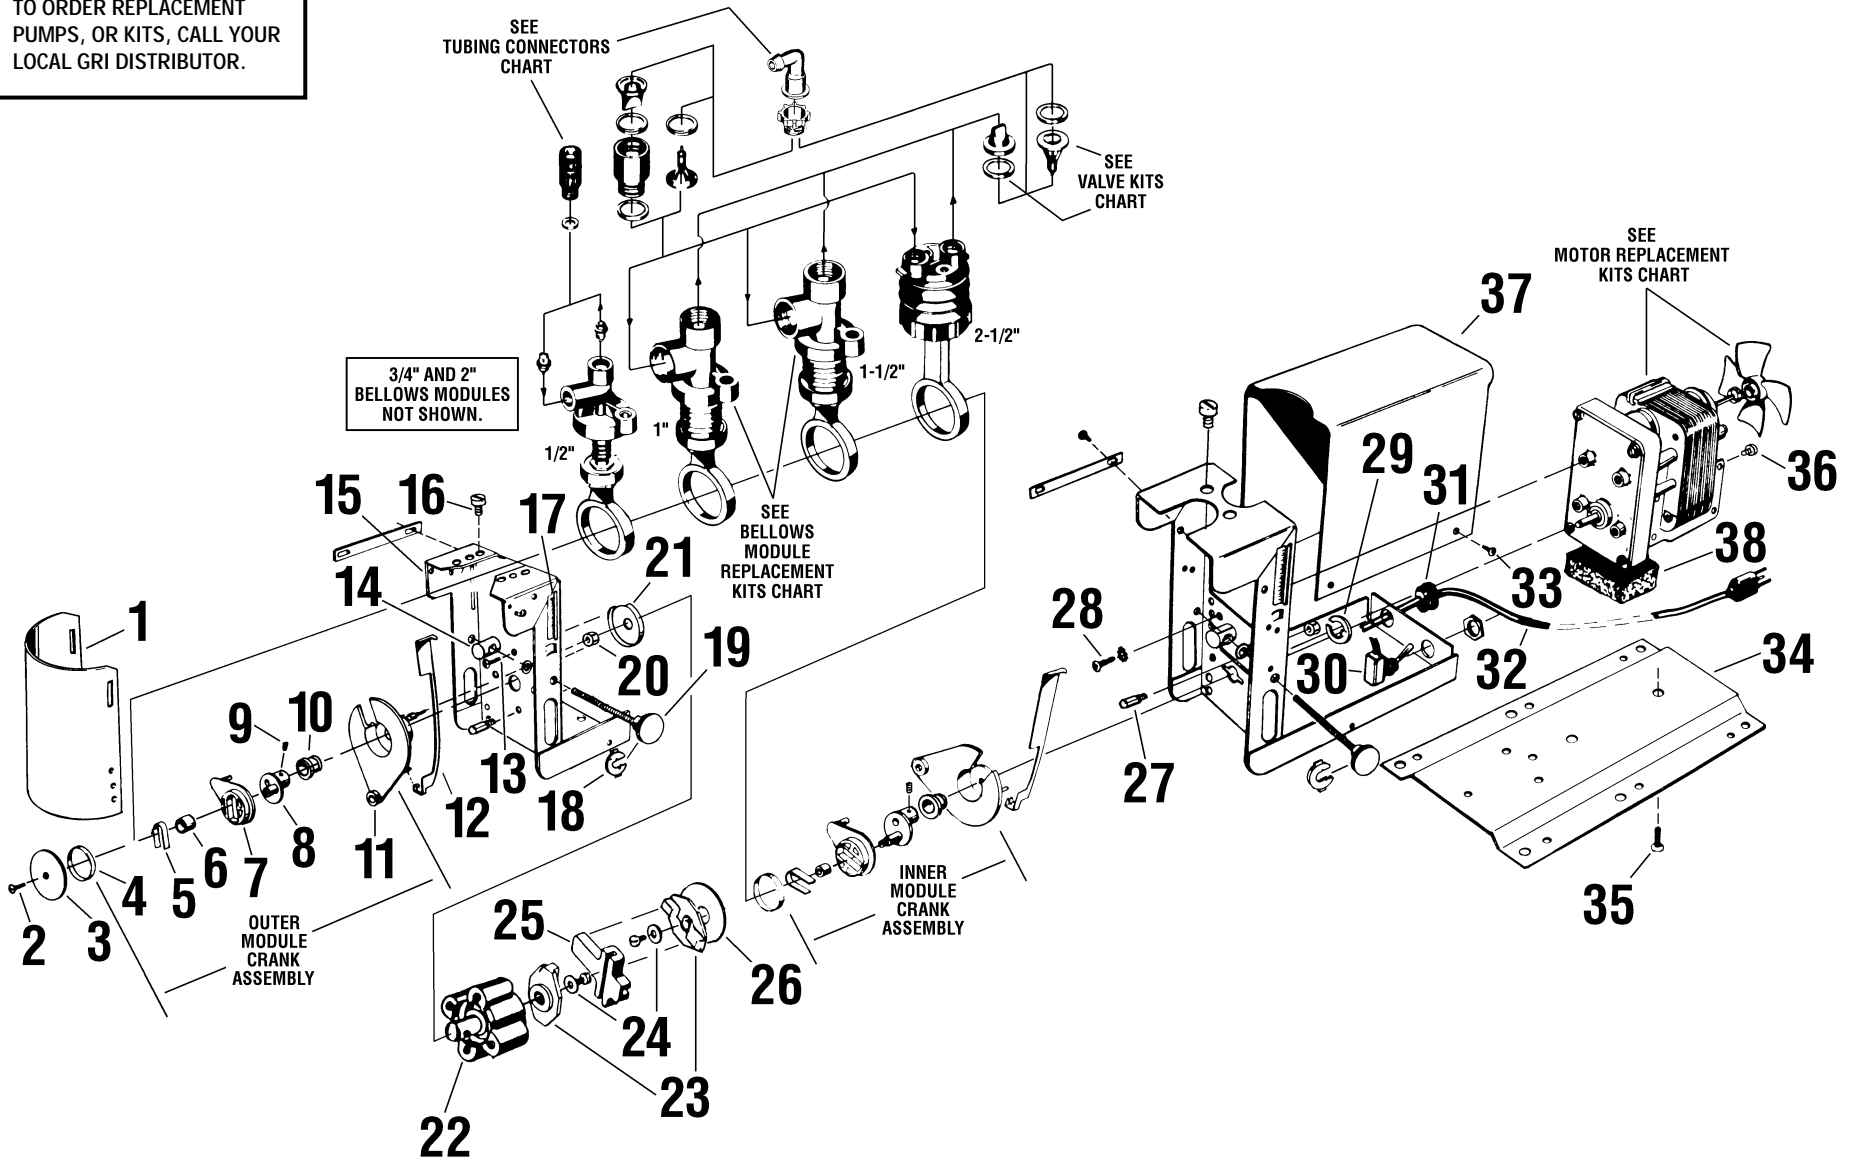

Improper application, installation, adjusting, or servicing can result in serious injury or death. Always disconnect power source before working on these products.

#### Caution:

Products with electric motors must be properly grounded and may start automatically at any time. For product information, consult Gorman-Rupp Industries, Bellville, Ohio 44813, Phone (419) 886-3001.
